EXTERIOR SUBLIMATION ALUMINUM

The main characteristic of the **anti-graffiti / UV resistant panels** is the high resistance to contamination: a special formulation makes these panels impenetrable to external pollutants, such as dirt and permanent markers / inks. While the cleaning of surfaces sublimated with regular powders would leave stains or blotches, panels with **Duraluxe anti-graffiti / UV resistant properties** can be cleaned easily with no traces of pollutants.

- .045 thick aluminum with heavy powder coating and final thickness .050
- Outdoor - 5 years warranty
- No chipping
- Chemical resistant
- Anti-graffiti
- The orange peel finish is the special attribute that make it UV stable for exterior use. Other outdoor metals may not have it. Leaving them to only *claim* to be outdoor UV stable...

Tech Tips

- Heavy Pressure: 50 - 55 psi
- Tap the transfer onto the Duraluxe
- Face transfer toward heat element
- Temperature: To ensure UV stability, imprint must fully saturate substrate surface, requiring metal to reach 392° (200 °C)
- Press for 100 to 120 seconds

DURALUXE
Exterior Sublimation Aluminium
12" X 24" Sheets - 5 per case

Duraluxe takes aluminum sublimation panels to the next level with high-definition colors specifically designed to withstand years of exposure to sunlight and severe weather. Only Duraluxe sublimation panels combine the scratch-resistance and durability of powder coating with the depth and color vibrancy of multi-layer imaging. Add to that, our patented Anti-Graffiti formulations and you get the most "powerful" outdoor sublimation panels available for your projects.
